Returning this week, on New to The Street TV, Mr. James Sapirstein, Chief Executive Officer at First Wave BioPharma, Inc. (NASDAQ: FWBI) (formerly known as AzurRX Biopharma, Inc.), a clinical-stage biopharmaceutical Company specializing in the development of targeted, non-systemic therapies for gastrointestinal (GI) diseases.

Mr. Sapirstein provides TV Anchor Jane King with a comprehensive update on current clinical trials in the USA and Europe. With 150+ people enrolled in a clinical trial on the gastrointestinal problems related to COVID-19, the Company expects in about 45-days those results on FW-COV. James talks about the current “Blind” trial ongoing in Italy, a study on ulcerated proctitis.

This study uses the Company’s drug, FW-UP (niclosamide), preliminary data expected sometime in the 2nd quarter, 2022. Adrulipase, the Company’s drug used in several studies over the last seven years, James talks about the drug’s 2- trials performed in 2022, resulting in mixed results. He believes the reformulation of the adrulipase compound could provide targeted results and expects to release preliminary data sometime during the second half of 2022. James looks forward to a rebound in the biotech industry and feels that FWBI is in a position for success throughout 2022.

Ms. Ashlee Stojanovski, Public Relations, Ariva, Inc. (CRYPTO: ARV) (\$ARV), joins the New to The Street show, explaining to Anchor Jane King the Company's global and local tourism and travel networks. Using the Company's cryptocurrency token, \$ARV, Ashlee passionately explains the foundation of Ariva and the first of its kind crypto platform used for everything related to travel. With the creation of a Defi travel blockchain ecosystem, Ariva connects travelers in many ways, reducing costs and aggravations that typically occur when traveling. Ashlee explains ARIVA's goal of becoming an actively used token, a commonly used exchange for travel and tourism. Ariva is designing and developing three ecosystems. The Ariva.World, Ariva.

Club and Ariva.Finance platforms provide users a unique one-of-a-kind experience, completely different from traditional travel/tourism. One of its main aims is to eliminate the complexity and difficulty of using the local currency in the destination country. The Ariva.Club, a social media platform, awards tokens for users to interact with others in the community, sharing inputs about travel experiences. A staking feature is forthcoming in the ensuing months ahead. And a Metaverse platform is coming soon, too. Ashlee reveals that since its inception in May 2021, ARIVA now has over 200,000 members and growing.

Eleven projects centered around floating wind technology are a step closer to fruition following a tranche of investment aimed at making the most of Britain's windy coastlines. The U.K. government said it would invest a total of £31.6 million (around \$42.57 million) in the projects. In addition, over £30 million of cash is set to come from private industry.

In a statement, the government said the money would be used to "develop new technologies that will enable turbines to be located in the windiest parts around the UK's coastline."

The projects incorporate a range of technologies and are spread across the U.K. One, from Marine Power Systems, will receive a little over £3.4 million and focus on the development of a floating foundation with an integrated wave energy generator.

A different initiative involving SSE Renewables, Maersk Supply Service Subsea, Bridon Bekaert Ropes Group and Copenhagen Offshore Partners will get more than £9.6 million to "develop and demonstrate new mooring system technologies, cable protection, floating turbine base design and an advanced digital monitoring system."

Elsewhere, a scheme looking to combine a compact floating foundation with an anchoring system will receive £10 million of investment. It will also harness monitoring tech that will enable operators to plan and undertake maintenance offshore, “saving on costs of towing back to shore.”
